OTHER CHEMICALS

Hydrogen Peroxide (Hydrogen peroxide)

Description

Hydrogen peroxide is pale blue in color; when watered, it becomes colorless. The viscosity value of hydrogen peroxide is higher than that of water. Being a versatile acid; It is produced in the special paper industry to give white color to papers.

Formula	H_2O_2
IUPAC number	hydrogen peroxide
Density	1.45 g/cm^3
Molar mass	34.0147 g/mol
Boiling point	150.2 °C
Melting point	-0.43 °C
